Its Relation to the Original and Only Gen-nine Toddy. Palm sugar, or jaggery, which is probably one of the earliest forms of crystalized sugar known to humanity, is procured from the sap of the cut flower stalk. By a singular provision of nature, dear to the souls of unregenis procured from the sap of the cut flower stalk. By a singular provision of nature, dear to the souls of uncegarierate humanity, whatever produces sugar for one's toddy produces also on the same atem the toddy to put it in. Thus, the selfsame cane supplied Mr. Stiggins with his famous pine-applerum and with the four large lumps which he employed to sweeten it. Thus, too, John Barleycorn, when "for England's good he yields his blood" in the form of bitter beer, passes first through the sweet stage of malt, in which condition he can easily be consumed over men who follow the same profession. which condition he can easily be converted into the substance known as maltose, or mail sugar.

An example, year many as you will

sugar, but when allowed to ferment it turns into an excellent substitute for pale ale, called paim wine, or toldy. This is, indeed, the original and only genuine toddy, all others being spurious imitations. The name belongs by right to the heathenish Mahyan and Indian mixture and has been imported into Britain by the returned Anglo-Indian, more especially in his commonest and most toldy consuming avatar as Tommy Atkins. "Mahy beer," again, is palm wine mixed with bitter herbs which cleek fermentation. The British mind regards it with contempt as a very inferior imitation of the genuine article; but then, we must remember that Tacitus described British beer as "corn and water decayed into a certain fair."

He is never happier than when he is never happier than when he is

rior imitation of the genuine article; but then, we must remember that Tacitus described British beer as "corn and water, decayed into a certain faint resemblance of wine." The sugar paim of the Malar countries will pour out from its cut flower stalks several quarts of sap daily for weeks together.

According to Mr. Alfred Russel Wailace, this sugar paim is destined in all probability to replace the cane in the next fifty years or so. It has the great practical advantages that it will grow on the poorest and rockiest soil, and that it can be cultivated with the lightest and most intermittent labor—qualities calculated to endear it at once to the mind of Quashie. A tree which will thrive on acres of waste ground, which will yield the best sugar at little labor or expense, and which is exactic adapted to the labits and manners of semi-civilized people, ongoit to turn the tables at last on that objectionable and flavorless interioper, beet-root. Correball Margazine.

The part played by bees on a certain occasion was, if the Abbe della Rocca is to be believed, equally effective. "Amurath, the Turkish emperor," says our authority, "during one of his sieges, lad unde a breach in the wall, and was about to storm the town. sieges, laid made a breach in the wall, and was about to storm the town, when he found that about the breach the inhabitants had placed numerous hives of bees. The Janissaries, brave as they were dared not face the insects, and refused to advance."

There is also a story, which we can bring ourselves to believe of a bring ourselves to believe of a transfer of the first visit here.

not bring ourselves to believe of a privateer's crew of forty to fifty men capturing a Torkish galley with five capturing a Torkish galley with five the mext time he visits that he never the mext time he with the first visit be to never capturing at the first visit because the mext time he with and at the first visit because the mext time he with an all the first visit because the mext time he with the first visit because the mext time he with the first visit because the mext time he will be the first visit because the mext time he will be the first visit because the mext time he will be the mext time he will be the mext time the first visit because the mext time to be the mext capturing a Torkish garley who hundred scamen and soldiers on board by means of a swarm of bees judicious-by thrown among the unspeakable gathers her up in his areas and traones. However this may be, there are enough authentic instances of strange methods of attack to provide amply sufficient material for the casuist in deciding what is fair and what unfair is strewn with invited avoices of

Burning naphtha, boiling lead, birds, carcasses of men and horses, Chicese stinkpots, besides the implements al-ready mentioned, have all been used for offensive and defensive purposes in actual warfare. And what with one modern systems of dazzling by electric light, submarine attacks, flying muchines, and elaborate lethal apparatus, it seems not improbable that we are on the eve of resorting to some of the more fanciful methods of eastern warfare, which, fifty or a hundred years ago, would most distinctly have been regarded as so many attempts to hit below the belt.—Saturday Review.

Wants to See That "Other Man." He is an "artist in black eyes"—not a when the sun spots granually increase pugilist, as some might imagine, but a clever old fellow who so fixes up discolored optics that they can be detected only by careful observation. He is something of a philosopher, but the other night he was so disgusted with the write and wanting in brightness once in every eleven pears. the pride and vanity of mankind in general that to relieve his tired feelings be indulged in a little spree.

A friend found him late in the evening, much the worse for wear, and sur-prised at his unusual condition, inquired what was the meaning of it. "Well," said the other, with slight scoherence. "I've been looking for

Heat of the Sun as Affected by the Spots

The fact has long been recognized that the sun is a variable sun. Of course its variations are slight, else they would have a disastrons effect upthe earth. The regularity with He is an "artist in black eyes" -- not a which the sun spots gradually increase run through a cycle of variatio brightness once in every eleven

It might well be supposed that if such changes take place they would be more easily perceived from the earth than from a greater distance. As a matter of fact, however, there are practical difficulties which render it almost impossible to get an accurate measure of the variation from year to year in the amount of the sun's radia-tion that falls on the earth.

Recently, however, M. Savelief has eported to the Academy of Sciences in Paris the result of experiments and ealenlations made by him since 1800 which strongly go to show that not only is the sun hotter when it is most

interesting to remember that, at present, we are not far from a maximum period of sun-spots, or in other words, according to M. Savellef, from a time when the sun's heat is most intense upon the earth.—Youth's Companion.

And quite despise the creatures, We must contess. Their business. Has its redecining features.
